Access Control and Security in Large Commercial Buildings

You need a solution that delivers proven reliability across multiple tenants with full building services integration and impregnable encryption. With the Concept 4000 hardware platform and Insight software; you've got it.
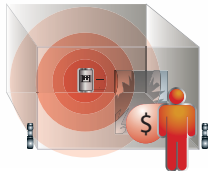

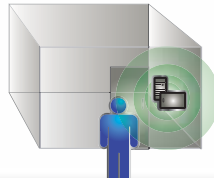

Big Buildings, One System

Large commercial installations present unique challenges in security and access control. From residential towers to shopping centres, the requirements are diverse and complicated. You need a solution that delivers proven reliability across multiple tenants with flexible reporting and impregnable encryption. A system that can communicate with multiple building automation systems in different protocols simultaneously. And most importantly, a user-friendly solution for users and administrators alike.

Only the Concept 4000 hardware and Insight software combination from Inner Range has the fire-power to deliver both aggressive pricing and a proven track record of future-proof solutions in large commercial installations.

Stop Intruders

Concept 4000 has your building covered. We can secure and protect your entire installation, day and night. As soon as an intruder enters a restricted area, Concept 4000 can sound the alarm, call a central monitoring station (to dispatch security guards) and notify the building manager with an SMS text message - all in a heartbeat.

Access Control

World-leading intruder detection is just the start. Concept can also deliver comprehensive access control for your facility. Quickly create card holders and assign them to tenancies. Design and print ID cards. A tamper-proof audit trail lets you review every single transaction. You'll know exactly what's going on, and where!

Multiple Tenants

Concept 4000 provides true multiple tenancies in one system. A single Control Module can be shared by up to 99 separate tenants, each with their own keypads and readers. Tenants can be granted control over local building automation including HVAC and power management. And unlike many competitors, Concept 4000 lets you assign items to more than one tenant simultaneously, without creating dummy tenancies.

Concept has been in the business for over 20 years. We have large commercial sites with thousands of doors and tens of thousands of users across the country and overseas. For case studies in the commercial sector, visit:

Core Security & Encryption

Concept 4000 and Insight are built on the latest AES encryption standard, making communications virtually tamper proof. Proprietary communications technology prevents packet snooping, eavesdropping and replay attacks: vital for any modern TCP/IP compliant system.

CCTV and Building Integration

Concept 4000 sets the benchmark for seamless integration of disparate building systems including CCTV, DVR, HVAC, plant control, storage lockers and alarm reporting to central monitoring stations. Concept 4000 speaks more protocols than any other system on the market today. Now add ERP and payroll integration, time and attendance, full muster reporting, lift control and high level database integration, and you have a winning solution for your commercial building.

Open Sales Channel

Inner Range systems are proudly sold through an independent network of trained, certified professionals. Our open technology and distribution agreements mean you're never locked in by one installer - unlike our competitors. Our accredited training not only assures your system gets installed correctly, but that you can get competitive quotes for ongoing installation and maintenance.

Concept 4000 and Insight: big buildings, one system.
